

The **ezARH** control device is a handle kit with rotating bidirectional control. It is suitable for:

ez-Box ezR44IN/W

(to control wireless wheels)

Wheels Series 160

(direct connection to the wheel)

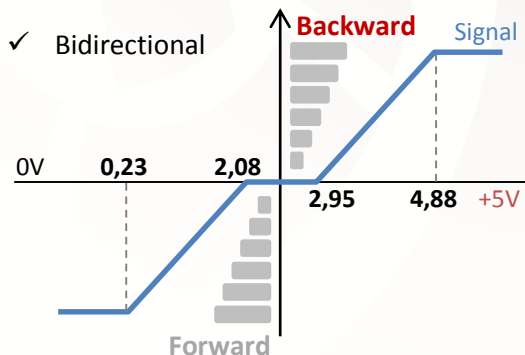

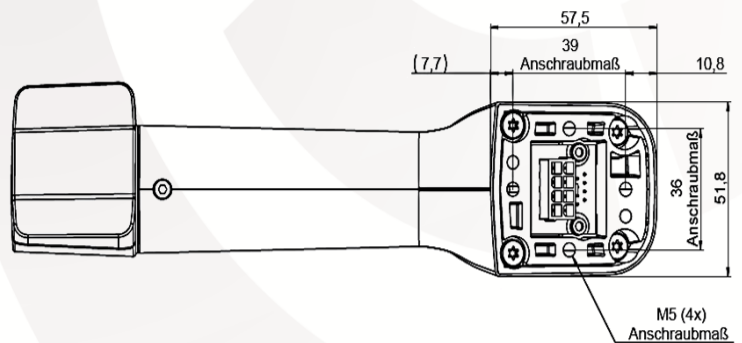

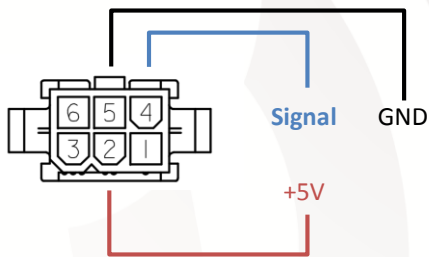

The ezARH is a handle equipped with a thumb-operated rotating control. It can control the speed of the equipped material, forward and backward with progressive command. A second handle is included into the kit to complete the integration.

This device is designed for a control panel mounting. It connects to the wheel or wireless interface using the **ezACxM** cable.

The handle with rotating control is equipped with a Molex Mini-Fit Jr 6 pin female connector, and works over a voltage range from 0 to 5V using the following calibration:

- ✓ Bidirectional
- ✓ Progressive
- ✓ Ergonomic use
- ✓ Easy to integrate
